

# EnduraBol<sup>®</sup>

CATTLE

## Cutting-Edge Bolus Technology

Single construction

Single point erosion

Active for up to 240 days

Manufactured  
in the UK

# How the Bolus Works

Once each bolus reaches a cow's reticulum, the top of the resin coating begins to chip away exposing the consistent surface area. Here, the trace elements and vitamins are held in a matrix structure that allows them to be released slowly and consistently. When the resin coating reaches the bottom of the bolus, it exposes the iron weight, which is then dissolved, leaving no residue or waste.

## Trace Elements

**Co Cobalt**  
Improves energy metabolism to help increase growth and conception rates. Also required for vitamin B12 production.

**Zn Zinc**  
Enhances coat condition and bone strength while improving energy metabolism. Also aids in iron absorption and fertility.

**Se Selenium**  
Enhances muscle development and acts as an antioxidant in synergy with vitamin E. Also supports calf vigour.

**Cu Copper**  
Aids in muscle development and maximises production levels. Also improves bone structure and coat condition.

**I Iodine**  
Supports a healthy immune system and growth rates. Essential for hormone production and key for good fertility.

**Mn Manganese**  
Essential for enzyme systems and bone strength. Maximises growth rates and fertility levels.

## Vitamins

**E Vitamin E**  
Maximises muscle growth and enhances meat quality. Also essential for fertility

**D<sub>3</sub> Vitamin D<sub>3</sub>**  
Improves energy metabolism and aids in calcium and phosphorus absorption. As well as supporting the immune system.

**A Vitamin A**  
Boosts growth and development as well as energy metabolism. Also supports immune system and vision.

 Twin cristic resin coating controls the release rate, ensuring a sustained and constant supply of nutrients

 Inert dissolvable iron weight ensures bolus remains in the reticulum

 Single point erosion from a constant surface area

 Trace element and vitamin matrix erodes, and nutrients are released to the animal

# What Makes EnduraBol® Unique

## Single Construction

Ensures there is no risk of the bolus breaking apart and super-dosing the animal

## Single Point Erosion

Provides a consistent daily supply of nutrients

## Wax Cap

Protects the bolus from eroding before it reaches the reticulum

## Active for up to 240 Days

Providing the animal with all essential micro-nutrients for up to eight months

## Three Vitamins

A unique cold pressure treatment process guarantees vitamins are not denatured during production

## Six Trace Elements

Including manganese and zinc, which are not normally found in other boluses

## Ideal For:

## Cattle at Turn Out

## Growing Cattle

## Finishing Cattle

Suitability

**CATTLE > 150KG**

Up to 8 Months Supplementation

**10 COW  
SUPPLY**

Net Weight 2.14kg  
20x Bolus
